DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/22/10 has been entered.

Information Disclosure Statement

2. The information disclosure statement filed 11/22/10 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. Cite No. 115 (Lange, V.H. et al., "Heidelberger Kapsel – ein Kleinstsender für die pH-Messung im Magen") contains no corresponding translation or explanation of relevance. It has been placed in the application file, but the information referred to therein has not been considered.

Allowable Subject Matter

3. Claims 1, 5, 7-13, 16, 17, 19, 20, 22-26 and 29-38 are allowed.

4. The following is an examiner's statement of reasons for allowance: The prior art fails to disclose or render obvious the claimed combination of an intrabody device comprising: a sensor sensing an environmental condition, said sensor sending a signal

Art Unit: 3779

to an internal processor in response to said sensed environmental condition, and said processor issuing an activation signal to a degradable immobilizer in response to the signal received by the sensor. Imran et al (U.S. Patent No. 6,535,764) discloses an intrabody device having a sensor and a degradable immobilizer; however, Imran et al fails to disclose the level of automation of the present invention. In particular, Imran et al fails to disclose said degradable immobilizer receiving an activation signal from an internal processor in response to a signal received by the sensor. In contrast, Imran et al discloses a sensor which sends a signal to an external processor, wherein said signal can be analyzed by a user and a degradable immobilizer can be manually deployed by the user.
